

MONTHLY SYLLABUS
SESSION-2017-18
CLASS-X
SUBJECT : MATHEMATICS

MONTH	CONTENT
	TERM-I
April 2017	<p><u>CHAPTER 1 : REAL NUMBERS</u></p> <p>Euclid’s division lemma, Fundamental Theorem of Arithmetic – statements after reviewing work done earlier and after illustrating and motivating through examples, Proofs of irrationality of $\sqrt{2}$, $\sqrt{3}$, $\sqrt{5}$. Decimal representation of rational numbers in terms of terminating / non-terminating recurring decimals.</p> <p><u>CHAPTER 2 : POLYNOMIALS</u></p> <p>Zeros of a polynomial. Relationship between zeros and coefficients of quadratic polynomials. Statement and simple problems on division algorithm for polynomials with real coefficients.</p> <p><u>CHAPTER 3 : PAIR OF LINEAR EQUATIONS IN TWO VARIABLES</u></p> <p>Pair of linear equations in two variables and graphical method of their solution, consistency/inconsistency.</p> <p>Algebraic conditions for number of solutions. Solutions of a pair of linear equations in two variables algebraically – by substitution, by elimination and by cross multiplication method.</p> <p style="text-align: center;">➤ Mental maths, Maths Lab, Activities & YUVA sessions</p>
May 2017	<p><u>CHAPTER 3: PAIR OF LINEAR EQUATIONS IN TWO VARIABLES</u></p> <p>Simple situational problems. Simple problems on equations reducible to linear equations.</p>

<p>July 2017</p>	<p><u>CHAPTER 4: QUADRATIC EQUATIONS</u></p> <p>Standard form of a quadratic equation $ax^2 + bx + c = 0$, ($a \neq 0$). Solutions of quadratic equations (only real roots) by factorization, by completing the square and by using quadratic formula. Relationship between discriminant and nature of roots. Situational problems based on quadratic equations related to day to day activities to be incorporated.</p> <p><u>CHAPTER 5: ARITHMETIC PROGRESSIONS</u></p> <p>Motivation for studying Arithmetic Progression, Derivation of the n^{th} term and sum of the first n terms of A.P. and their application in solving daily life problems.</p> <p><u>CHAPTER 7: COORDINATE GEOMETRY</u></p> <p>LINES (In two-dimensions)</p> <p>Review: Concepts of co-ordinate geometry, graphs of linear equations. Distance formula. Section formula (internal division). Area of a triangle.</p> <p>➤ Mental maths, Maths Lab, Activities & YUVA sessions.</p>
<p>August 2017</p>	<p><u>CHAPTER 6: TRIANGLES</u></p> <p>Definitions, examples, counter examples of similar triangles.</p> <p>(Prove) If a line is drawn parallel to one side of a triangle to intersect the other two sides in distinct points, the other two sides are divided in the same ratio.</p> <p>(Motivate) If a line divides two sides of a triangle in the same ratio, the line is parallel to the third side.</p> <p>(Motivate) If in two triangles, the corresponding angles are equal, their corresponding sides are proportional and the triangles are similar.</p> <p>(Motivate) If the corresponding sides of two triangles are proportional, their corresponding angles are equal are the two triangles are similar.</p> <p>(Motivate) If one angle of a triangle is equal to one angle of another triangle and the sides including these angles are proportional, the two triangles are similar.</p> <p>(Motivate) If a perpendicular is drawn for the vertex of the right angle of a right triangle to the hypotenuse, the triangles on each</p>

	<p>side of the perpendicular are similar to the whole triangle and to each other.</p> <p>(Prove) The ratio of the areas of two similar triangles is equal to the ratio of the squares of their corresponding sides.</p> <p>(Prove) In a right triangle, the square on the hypotenuse is equal to the sum of the squares on the other two sides.</p> <p>(Prove) In a triangle, if the square on one side is equal to sum of the squares on the other two sides, the angles opposite to the first side is a right angle.</p> <p><u>CHAPTER 14: STATISTICS</u></p> <p>Mean, median and mode of grouped data (bimodal situation to be avoided). Cumulative frequency graph.</p> <p><u>CHAPTER 15: PROBABILITY</u></p> <p>Classical definition of probability. Simple problems on single events (not using set notation).</p> <p>➤ Mental maths, Maths Lab. Activities & YUVA sessions.</p>
September 2017	<p><u>CHAPTER 10: CIRCLES</u></p> <p>Tangent to a circle at point of contact</p> <p>(Prove) The tangent at any point of a circle is perpendicular to the radius through the point of contact.</p> <p>(Prove) The lengths of tangents drawn from an external point to a circle are equal.</p>
	TERM II
October 2017	<p><u>CHAPTER 8: INTRODUCTION TO TRIGONOMETRY</u></p> <p>Trigonometric ratios of an acute angle of a right-angled triangle. Proof of their existence (well defined); motivate the ratios whichever are defined at 0° and 90° Values (with proofs) of the trigonometric ratios of 30°, 45° and 60°. Relationships between the ratios.</p> <p>Proof and applications of the identity $\sin^2 A + \cos^2 A = 1$. Only</p>

	<p>simple identities to be given. Trigonometric ratios of complementary angles.</p> <p><u>CHAPTER 9: SOME APPLICATIONS OF TRIGONOMETRY</u></p> <p>Heights and distances : Angle of elevation, Angle of Depression.</p> <p>Simple problems on heights and distances. Problems should not involve more than two right triangles. Angles of elevation / depression should be only 30°, 45°, 60°</p> <p><u>CHAPTER 11: CONSTRUCTIONS</u></p> <p>Division of a line segment in a given ratio (internally).</p> <p>Tangents to a circle from a point outside it.</p> <p>Construction of a triangle similar to a given triangle.</p> <p>➤ Mental maths, Maths Lab, Activities & YUVA sessions.</p>
November 2017	<p><u>CHAPTER 12: AREAS RELATED TO CIRCLES</u></p> <p>Motivate the area of a circle; area of sectors and segments of a circle. Problems based on areas and perimeter / circumference of the above said plane figures. (In calculating area of segment of a circle, problems should be restricted to central angle of 60°, 90° and 120° only. Plane figures involving triangles, simple quadrilaterals and circle should be taken.)</p> <p><u>CHAPTER 13: SURFACE AREAS AND VOLUMES</u></p> <p>Surfaces areas and volumes of combinations of any two of the following: cubes, cuboids, spheres, hemispheres and right circular cylinders / cones. Frustum of a cone.</p> <p>Problems involving converting one type of metallic solid into another and other mixed problems. (Problems with combination of not more than two different solids be taken.)</p> <p>➤ Mental maths, Maths Lab, Activities & YUVA sessions.</p>
December 2017	REVISION, MOCK TEST
January 2018	REVISION, PRE-BOARD EXAMINATION

February 2018	REVISION
